# **Co-developing end-of-life resources** *an equal and reciprocal relationship*

Macdonald A S<sup>1</sup>, Neves S<sup>1</sup>, Bamford C<sup>2</sup>, McLellan E<sup>2</sup>, Poole M<sup>2</sup> & Robinson L<sup>2</sup>

<sup>1</sup> School of Design, The Glasgow School of Art, UK <sup>2</sup> Institute of Health and Society, Newcastle University, UK

27<sup>th</sup> Alzheimer Europe Conference / Care today, cure tomorrow / Berlin, Germany / 2 -4 October 2017

### SEED

## The **SEED** programme - **Supporting Excellence** in **End** of life care in **Dementia**

Funded by the National Institute for Health Research (NIHR) Programme Grant (Applied Research).

PI Prof Louise Robinson, Newcastle University.

https://research.ncl.ac.uk/seed/

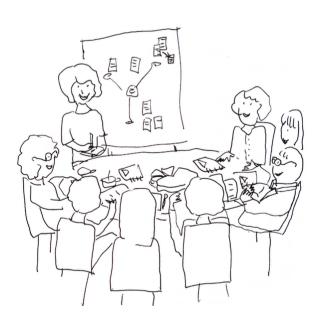

## Focus of presentation

How do we involve people with dementia, their families and carers, in co-designing a resource for difficult conversations and decisions about key end-of-life plans?

## The Design Challenge

- a sensitive approach recognizing not only disability but also empowering and supporting capability

- some Patient and Public Involvement (PPI) models can be too narrow, indeed tokenistic, not acknowledging equality and diversity issues <sup>1</sup>

- shifting PPI thinking from 'doing to', and 'doing for' to 'doing with' people<sup>2</sup>

1. Ocloo J, Matthews R. (2016). From tokenism to empowerment: progressing patient and public involvement in healthcare improvement. *BMJ Qual Saf.* 25 (8).

2. New Economics Foundation (2014). *Co-producing wellbeing. Why it matters and how to do it*. Available at: https:// prezi.com/eitdkeaoly8t/co-production-theory-and-practice/

## Nature of co-design approach taken

*Diagram derived from:*. New Economics Foundation (2014). Co-producing wellbeing. Why it matters and how to do it. Available at: https://prezi.com/eitdkeaoly8t/co-production-theory-and-practice/

## Why involve Design researchers from the Glasgow School of Art?

We are experienced in:

- Inter-disciplinary team-working within healthcare
- 'Inclusive Design'
  - Participative co-development of tools and interventions
  - 'convivial' workshop design
- Mock-ups and prototypes as a means of hypothesising, questioning and acquiring data
- Visualisation of data

## **Design methods**

Design researchers joined the more traditional specialisms in the research team ...

dementia palliative nursing care

### ... introducing methods and tools to involve all the key stakeholders i.e.,

people with dementia family carers healthcare teams nurse specialists

## Findings from SEED qualitative research - work stream 2

Findings indicated 7 key factors influence end-of-life care in dementia <sup>1</sup>:

- 1. Timely planning discussions
- 2. Recognition of end of life and provision of supportive care
- 3. Co-ordination of care
- 4. Effective working relationships with primary care
- 5. Managing hospitalisation
- 6. Continuing care after death
- 7. Valuing staff & on-going learning

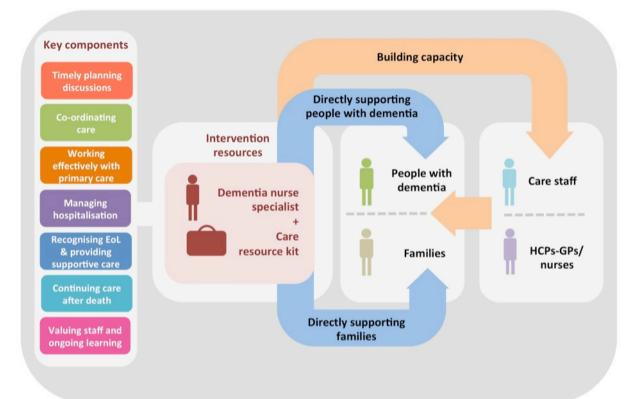

1. Bamford, C., Poole, M., Lee, R., McLellan, E., Exley, C. & Robinson, L. (2017). Improving End-of-life Care in Dementia: Key Areas for Improvement. *Innovation in Aging*, 1(suppl\_1), 266-266.

## The SEED Intervention

SCHOOL

OF DESIGN THE GLASGOW SCHOOL # ARE

An intervention to increase the chances of a good death for people with dementia

## Findings from SEED qualitative research - work stream 2

Findings indicated 7 key factors influence end-of-life care in dementia <sup>1</sup>:

- **1.** Timely planning discussions
- 2. Recognition of end of life and provision of supportive care
- 3. Co-ordination of care
- 4. Effective working relationships with primary care
- 5. Managing hospitalisation
- 6. Continuing care after death
- 7. Valuing staff & on-going learning

1. Bamford, C., Poole, M., Lee, R., McLellan, E., Exley, C. & Robinson, L. (2017). Improving End-of-life Care in Dementia: Key Areas for Improvement. *Innovation in Aging*, 1(suppl\_1), 266-266.

## Resource to support **timely planning discussions**

Means

Care Plan Guide (CPG)

### Purpose

To **enable** and **encourage discussion** of **key plans** and **joint decision-making** between people with dementia and their families and carers.

## Resource to support **timely planning discussions**

## **Key plans**

- 1) lasting power of attorney (health & welfare; and property & finance)
- 2) advance statement
- 3) advance decision to refuse treatment (including non-resuscitation)
- 4) making a will
- 5) funeral planning

## Resource to support **timely planning discussions**

### **Initial specification for Care Plan Guide**

- entry level explanations
- user friendly language avoiding legalistic jargon
- all plan details in one document
- record of progress, decisions, location of actual documents
- freely available
- downloadable

## Design-friendly / accessibility design issues

For example *app interface* <sup>1, 2</sup> *language* <sup>3</sup> *legible print* <sup>4</sup>

1 Dementia Engagement and Empowerment Project (2013) Guide: Creating websites for people with dementia.

2. Joddrell, P. & Astell, A. (2016) Studies involving people with dementia and touchscreen technology: A literature review. *JMIR Rehabilitation Assistive Technologies*, 3(2), e10.

3. Dementia Engagement and Empowerment Project (2013) Writing dementia-friendly information.

4. Knowles, D. (2014) Dementia Friendly Print

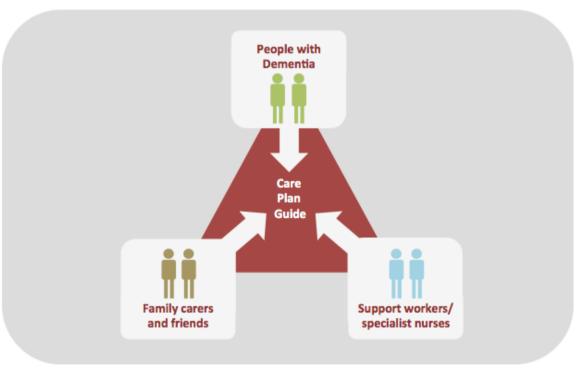

## **Co-design through stakeholder workshops**

As the use of the CPG would involve all stakeholder groups in discussions at some point, its development requires input from each of these groups.

## **Co-design through stakeholder workshops**

5 workshops: 2 x PPI advisory group + 3 x stakeholders

Specific questions discussed in the workshops included

- The concept of the CPG
- Content
- Format
- Language
- Medium
- Design
- Title
- Other comments

## **Participants**

*Workshop 1 PPI Advisory Group; 9 participants* 

#### Workshop 2: Professionals

9 participants: 8 support workers and 1 registered nurse

#### Workshop 3: People with Dementia, Family Carers & OTs

7 participants: 2 people with dementia, 3 family carers and 2 occupational therapists

#### Workshop 4: People with Dementia & Family Carers

4 participants: 2 family carers and 2 people with dementia

*Workshop 5 PPI Advisory Group; 8 participants* 

## Recruitment

#### Workshops 1 & 5: PPI Advisory Group

• The priority-setting group from the Alzheimer Society's Research Network contribute to a Patient/Public Advisory Group (PPAB); additional network members will be recruited to ensure a membership of 8-10 members throughout the programme

#### Workshop 2: Recruitment of Professionals

 Recruited from a specially designed community complex with 6 supported households aiming to create a family atmosphere for older people requiring full-time care, including those with dementia.

#### Workshop 3 & 4: Recruitment of families and people with dementia

 Invited to participate through the support of the project manager at Alzheimer Scotland for Dementia Circle, who acted as a 'gate-keeper' to identify potential participants and introduce the researcher to the groups.

## **The Prototypes** *app version – sample interactive screens*

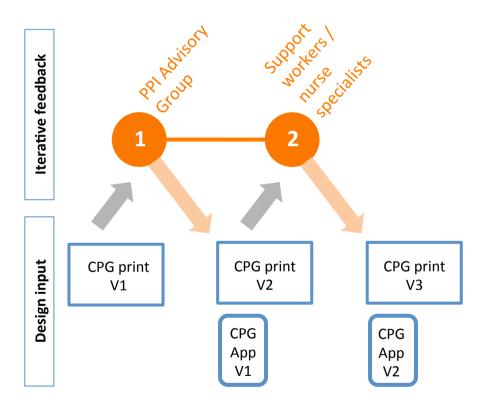

## The co-design process for CPG booklet and app

SCHOOL

HE GLASGO

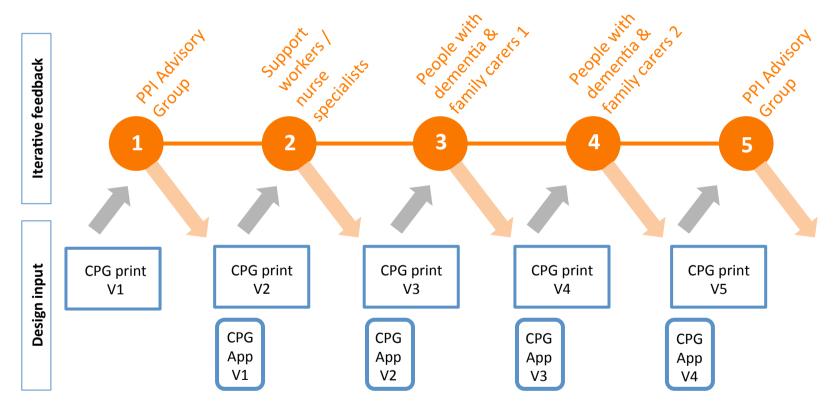

Iterative development: prototype paper & app versions of Care Plan Guide (CPG)

#### SCHOOL: OF DESIGN THE GLASGOW SCHOOL: # ARL

## The co-design process for CPG booklet and app

Iterative development: prototype paper & app versions of Care Plan Guide (CPG)

## **PwD and family carers' feedback**

Samples from prototype mark-up, workbooks and group discussions

'What is the first step I can take? - not clear what does it means'

'Not using acronyms (e.g. AS) you need to write all name'

#### **Advantages**

'Colours make this easy to read' 'Is handy, easy, accessible' 'Everything is in one place' 'Save paper work' 'After this, I would prefer the app' **Disadvantages** 

'We have to be knowledgeable to find this' 'Functionality, make it work' 'Apps should have a diagram [to explain] how to use it.

## Findings 1

Overall, participants indicated that the CPG, as a general concept, would not only positively address the intended purpose of facilitating timely planning discussions between people with dementia and their families and carers but would also be helpful for many other individuals wishing to have these types of difficult timely planning discussions.

## Findings 2

The CPG structure, with its overview, general introduction to each plan, detail and links to further information, with **all information kept in a single place together with the record of progress and decisions against each plan** were all seen as helpful.

Suggested improvements: **navigation; colour to differentiate different sections; font size; and arrangement and amount of text**, were embodied in further iterations of the CPG (both paper and app versions) for subsequent workshops.

The initial use of **acronyms** and **formal legal language** were regarded as unhelpful and later revised.

Younger generations (family members and professional carers) preferred the **convenience of the app version enabling direct links** to further web-based resources.

SCHOOL

OF DESIGN THE GLASGOW SCHOOL: # ARE

The CPG was designed to accommodate and reconcile the different stakeholder needs.

Design input

What the team initially conceived as a single resource should actually be **two separate but related resources**, i.e. **one dealing with 'what' needs to be discussed and agreed and the other with 'how' to initiate these difficult conversations** – so some further work required.

## Limitations

Only people with dementia and carers who were willing to discuss end-of-life care participated in the co-design groups.

The difficulties experienced with recruitment confirmed that many people with dementia and carers prefer not to engage with this topic.

We cannot assume that their views are similar to those of people who participated in the co-design workshops.

## Conclusions

The findings from the SEED programme corroborate the case for 'rich' stakeholder involvement in translational research processes through a co-design approach.

Our model of stakeholder involvement has helped the SEED **programme move the discourse from that of designing 'for' to that of designing 'with'** its stakeholders in these very sensitive matters around end-of-life – i.e., a more equal and reciprocal relationship.

Despite our concerns and anxiety around the research topic, **people with dementia** and their families were enthusiastic and welcomed and valued research addressing the sensitive and potentially distressing area of end-of-life and in planning ahead for future care.
