EVIDENCE IN POLICY FORTNIGHT 2019

Understanding indoor air quality

Monday 4th November 2.30-4.30pm

Victoria Quay Edinburgh

This session provides a summary of the latest knowledge on indoor air quality (IAQ), explaining what affects air quality, how air quality affects us, how it can be measured and how it can be improved.

Guest speakers will present their findings on the links between energy efficiency measures, ventilation and IAQ, as well as between indoor and outdoor air quality. We also discuss the impacts of poor IAQ on building fabric and human health. The session ends with a live demo monitoring the air quality in the room.

GUEST SPEAKERS

Prof Mathew Heal Edinburgh University

Barbara Lantschner John Gilbert Architects

Dr Gráinne McGill Mackintosh Environmental
Architecture Research Unit Glasgow School of Art
